Schematic Diagram

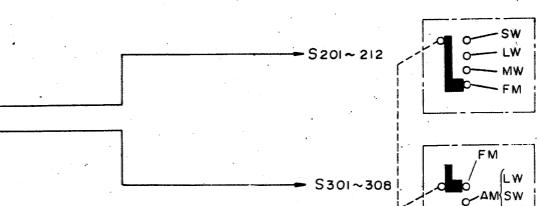

Notes:

1. All resistors and capacitors are rated in Ω and μF , unless otherwise noted.
2. Capacitor marked with Δ is built in IF Transformer.
3. Resistor marked with \ast are to be selected in value.
4. Voltage values shown are measured to ground circuit with a DC voltmeter ($20\text{k}\Omega/\text{volt}$ or more) with no radio signal received.
5. ME. shows the tuning meter.

Current values shown are measured with a DC ammeter with no radio signal received.
 Current and Voltage values shown in () are measured with no radio signal received and with band selector set to AM.
 Variations may be noted due to normal production tolerances.
